Proceedings of the 5th annual ACM symposium on User interface
software and technology December 1992
It is often difficult in computer graphics applications to understand
spatial relationships between objects in a 3D scene or effect
changes to those objects without specialized visualization and
manipulation techniques. We present a set of three-dimensional
tools (widgets) called “shadows” that not only
provide valuable perceptual cues about the spatial relationships
between objects, but also provide a direct manipulation interface
to constrained transformation techniques. These ...
